COX QuickLoad Software

AUTOMATED CALIBRATION TECHNOLOGY FOR COX FLOW COMPUTERS

- Automatically configures COX Model 4010 & 4020 Flow Computers
- Calibration data loaded in a fraction of the time
- Eliminates manual entry of calibration data
- Minimizes operator error
- Operates with factory supplied or user generated calibration and fluid data.

PACKAGE INCLUDES:

- COX QuickLoad Software
- RS-232/RS-485 Converter
- Manual

COX QuickLoad Software

AUTOMATED CALIBRATION TECHNOLOGY FOR COX FLOW COMPUTERS

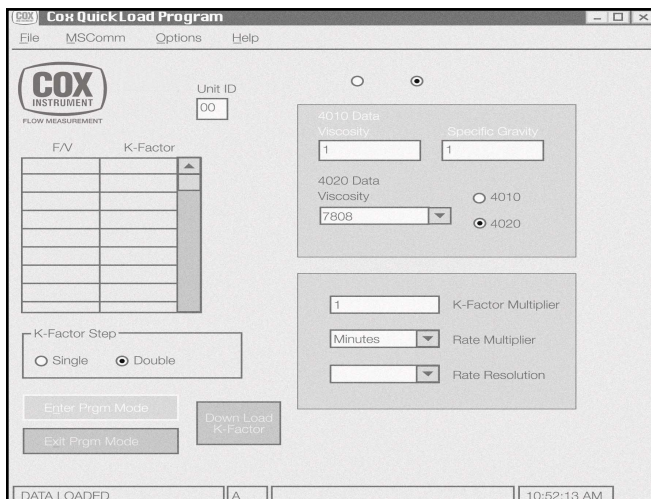

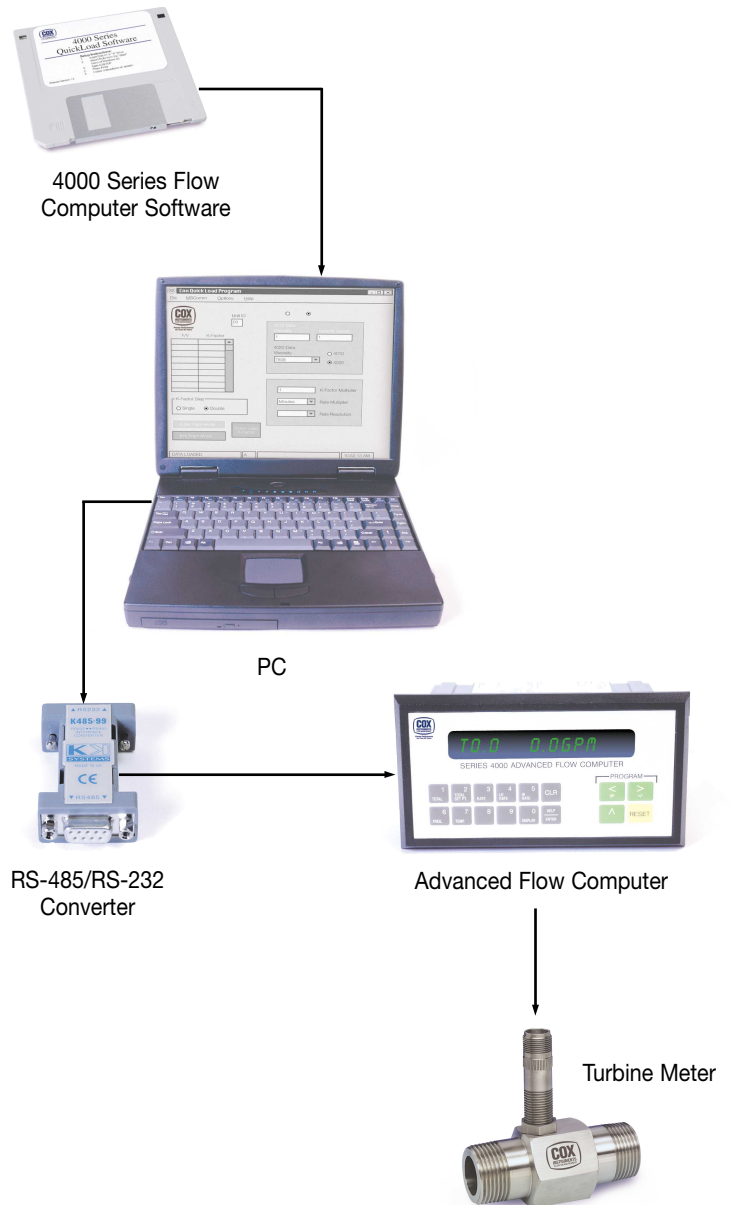

COX QuickLoad technology automatically loads calibration data to maximize flow computer and operator productivity. COX QuickLoad consists of one data disk containing operating software, an RS-485/RS-232 converter, and a comprehensive operator's manual.

COX QuickLoad installs on a PC and links it via an RS-485/RS-232 converter to the 4010 or 4020 Flow Computer. Simple mouse commands instantly load factory specified calibration data as well as custom calibration parameters specified by the operator.

COX QuickLoad software provides data for most common process fluids—allowing exceptionally fast changeover when process fluids change or for application with multiple flow meter locations.

COX QuickLoad is a robust program that simplifies calibration programming and minimizes operator errors that lead to process failures.

- Automatically configure COX 4010 and 4020 Flow Computers
- Instantly load calibration data
- Minimize operator error
- Facilitate rapid changeover
- Customizable to any process fluid
- Windows 95, 98 & NT compatible
- Y2K compliant

Easy setup/configuration. Fast data download.
